SUMMARY

Software engineering graduate from CODE University with hands-on experience in native iOS & Android development, HTML, CSS, JavaScript and React. Shipped two apps to the App Store and Google Play.

EDUCATION

B.Sc. Software Engineering

CODE University of Applied Sciences

2026

Berlin, Deutschland

Thesis: Mobile Platform Migration - A Systematic Literature Review

Capstone: "Hamba" Mobile Application - a full-stack mobile application shipped to the App Store, serving as practical culmination of the degree.

- Algorithms and Data Structures - Cyber Security - Concepts of Programming Languages
- Relational Databases - Clean Code - Mobile Development - Automated Software Testing
- Technical Documentation

PROJECTS

Hamba

2023 – 2026

Lead Developer & Product Originator

A full-stack mobile app guiding users to curated nature spot across Berlin via an interactive map. The most technically ambitious project of my degree. Shipped to the App Store with **200+ downloads**.

Led a team of **4 across 4 semesters** using **Agile methodology**, maintaining team cohesion through the full development lifecycle - rare for student projects at CODE.

Owned all software engineering decisions: architecture, clean code standards, automated testing, and code review.

Chess Tournament Tracker

2025

Sole Developer

Built to support the chess league I founded at Code University, which grew to **30 members**. Gave students who previously only had one chess partner access to a wider community. Started in React, then deliberately simplified to vanilla HTML, CSS and JavaScript to match the tool to the problem.

Kalimba Note Visualiser

2025

Sole Developer

A React app built for a musician who needed a visual way to notate kalimba music. Users assign colours to symbols, see them mapped onto a kalimba diagram in real time, and **export the results as a PDF**.

SKILLS

Mobile Development: Swift, SwiftUI, Kotlin, Jetpack Compose

Backend & Cloud: AWS (EC2, IAM), Supabase, Vapor, PostgreSQL, Vercel

Frontend: HTML, CSS, JavaScript, React

Version Control: Git, GitHub
